

<<< ANGULAR WITH BLAZOR WASM WEB-COMPONENT >>>

SCENARIO - 1: Multiple Razor Pages Blazor Web Assembly into Angular App

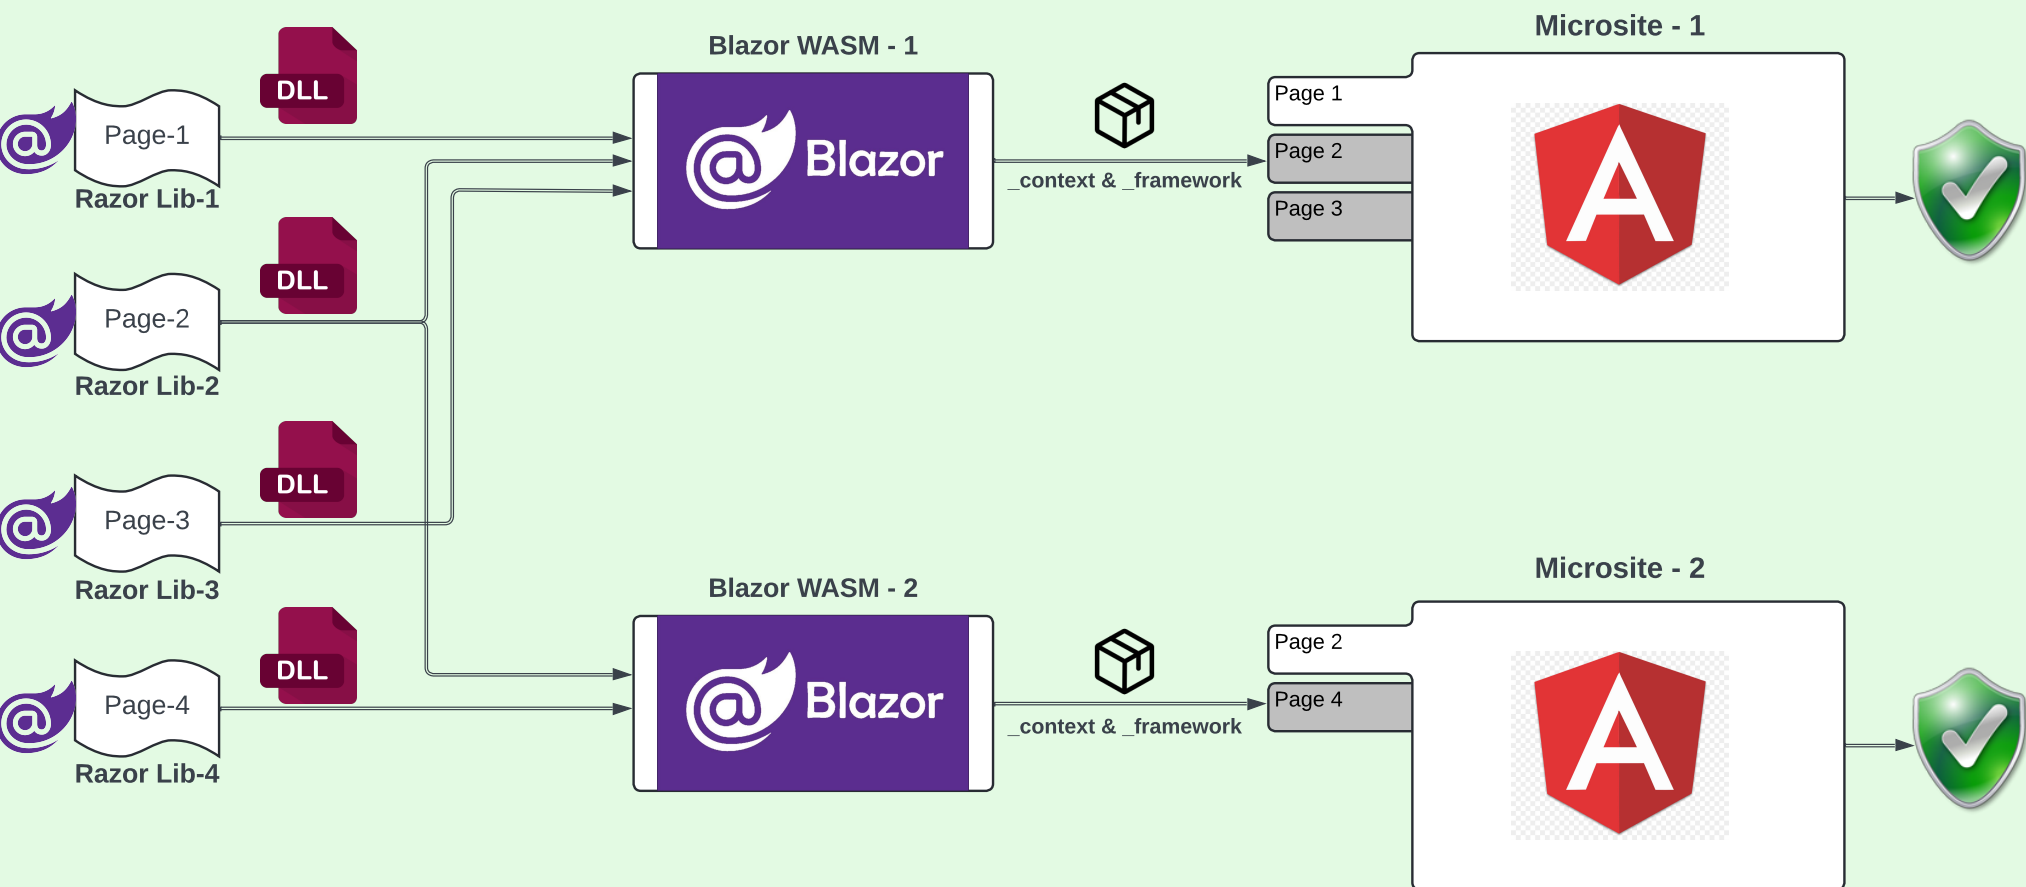

Disadvantage
Single Blazor WASM will have multiple pages, which may not be required for a particular angular microsite we are developing.

SCENARIO - 2: Multiple Blazor Web Assemblies with single razor page into Angular App

Disadvantage
Due to multiple Blazor bundles integration into single Angular app, the Blazor framework will throw conflict exception when consumed in Angular.

SCENARIO - 3: Multiple Razor Libraries with single page referenced in Blazor WASM integrates into Angular App

Advantage
Modular approach with internal Razor libraries getting referenced to any Blazor Web Assembly which can be shipped to Angular App with no Blazor framework conflict.
